

GitHub Licenses – One Line Descriptions

License Name	One-line Description
No License	Code is fully copyrighted; others cannot use, modify, or distribute it legally.
Apache License 2.0	Permissive license allowing use, modification, and distribution with patent protection.
GNU General Public License v3.0	Strong copyleft license requiring source code disclosure for derivatives.
MIT License	Very permissive license allowing almost unrestricted use with attribution.
BSD 2-Clause License	Permissive license with minimal requirements and no endorsement clause.
BSD 3-Clause License	Like BSD 2-Clause but prohibits using author names for promotion.
Boost Software License 1.0	Highly permissive license designed for C++ libraries with minimal restrictions.
Creative Commons Zero (CC0)	Waives all rights and places the work in the public domain.
Eclipse Public License 2.0	Weak copyleft license mainly used for Eclipse ecosystem projects.
GNU Affero General Public License v3.0	Requires source release even for software used over a network.
GNU General Public License v2.0	Strong copyleft license requiring derivative works to be open source.
GNU Lesser General Public License v2.1	Allows linking with proprietary software while keeping core open.
Mozilla Public License 2.0	File-level copyleft balancing open source and proprietary use.
The Unlicense	Dedicates the software to the public domain with no restrictions.
